## EXPERIENCE

### **Crossfire Consulting**, Yorktown Heights, NY

Jul 2017 - present

#### Software Engineer

- Built message clearinghouse software to act as level 1 middleware between factory production machinery and third party inventory storage xml sent over ActiveMq. Provided front end configuration and tracking using Angular.js
- Made continuous integration tasks using Jenkins to handle upgrade and code coverage testing.
- Worked on consultant tracking software built with php Zend Framework
- Created RSS feeds of company data to integrate with social media tools
- Tested factory production algorithms through coding a process simulation in a Javascript IDE
- Helped client with Wix website create custom shopping and booking experience using Javascript WixCode, integrating with 3rd party APIs via asynchronous requests

### **NYC Devshop**, New York, NY

Jun 2015 - Jan 2017

#### Full Stack Web Developer

- Designed load balancing architecture for cloud applications using Amazon Web Services
- Built out new features for client applications such as expanded subscription service tiers and data export tools from MYSQL DB to CSV, Excel and JSON
- Developed custom Point Of Sales software solutions using the Vend API and Stripe payment processor to manage unique client needs
- Built detailed admin analytics using ActiveRecord to track sales and order info
- Worked on API backend for iOS applications, securely identifying devices by UUID tokens, responding to server requests to and with JSON
- Deployed production Ruby on Rails apps using Amazon Elastic Beanstalk, Heroku and Digital Ocean
